

INFORMATION TECHNOLOGY

The Information Technology area of study provides students with the opportunity to develop knowledge and skills in the use of computers.

The Lower School program introduces students to the computer technology and develops skills in the use of common productivity tools including spreadsheets, databases and multimedia programming.

Information Technology incorporates the area of study known as Business Studies. In Business studies, students are provided with the knowledge and skills that are required in the modern business environment. Students develop skills in document production, handling their own finances, and maintaining appropriate business records.

For Upper School students the Business Studies includes courses in Accounting and Finance, Small Business Management, and Administrative Systems (Office Skills).

Information Technology at Morley Senior High School allows students to gain the practical knowledge and skills that can be used either for their own personal requirements or in the successful pursuit of a career in the world of business.
